NOVELTIES AND SPECIALTIES IN HILL'S CHOICE SELECT TREE and SHRUB SEEDS

Seeds of trees and shrubs as a general rule should be planted during the months of April, May and June, same as garden or flower seeds, and their culture is almost identical, great care being necessary to see that the seed is not planted too deep. The seed comes best when planted in rich, sandy loam, and the plants should be naturally or artificially sheltered from heavy east and northeast winds.

Free Delivery by Mail.—All seeds ordered at the packet, ounce or pound prices will be sent by mail, postage prepaid by us, to any address in America.

All seeds are carefully tested. Our aim is to make quality the first consideration, our half century's reputation being behind these seeds, just as it is back of our trees and plants, and we earnestly solicit a share of your kind orders for 1911.

NORWAY SPRUCE.

This is a variety of inestimable value, for it grows into large, beautiful trees, admired by everybody, and serves as windbreaks or can be planted on lawns for shade, ornament, etc. Grows quickly into big trees with luxuriant foliage.
